Therapeutic Equivalence Evaluations

PREFACE TO SIXTH EDITION

The Approved Drug Products with Therapeutic Equivalence Evaluations publication (the List) identifies currently marketed drug products approved on the basis of safety and effectiveness by the Food and Drug Administration (FDA) under the Federal Food, Drug, and Cosmetic Act (Act). In addition, it contains therapeutic equivalence evaluations for approved multisource prescription drug products. These evaluations have been prepared to serve as public information and advice to state health agencies and pharmacists in the administration of drug product selection laws, to promote public education in the area of drug product selection and to foster containment of health costs. Their presence in this publication does not impose any requirements or restrictions. Further, inclusion of products on the List is independent of any current regulatory action through administrative or legal means against a drug product. The main criterion for the inclusion of any product is its being the subject of an approved application.

In order to contain drug costs, virtually all states have adopted laws that encourage or mandate the substitution of drug products. These state laws generally require that substitution be limited to drugs on a specific list (the positive formulary approach) or that it be permitted for all drugs except those prohibited by a particular list (the negative formulary approach).

A number of states sought the assistance of FDA in preparing both positive and negative formularies. Because of the number of such requests, it became apparent that FDA could not serve the needs of each state on an individual basis. The Agency also recognized that providing a single list based on common policies would be preferable to evaluating drug products on the basis of differing definitions and criteria in various state laws. As a result, on May 31, 1978, the Commissioner of Food and Drugs sent a letter to officials of all states stating FDA's intention to provide a list of all prescription drug products that are approved by FDA for safety and effectiveness, along with therapeutic equivalence determinations, for multisource products.

The List was distributed as a proposal in January 1979, and included only currently marketed prescription drug products approved by FDA through new drug applications (NDAs) or abbreviated new drug applications (ANDAs) under the provisions of Section 505 of the Act, or in the case of antibiotics, through analogous applications known as Forms 5 or 6 under Section 507 of the Act.

The therapeutic equivalence evaluations in the List reflect FDA's application of specific criteria to the approved multisource prescription drug products on the List. These evaluations are presented in the form of code letters that indicate the basis for the evaluation made. An explanation of the code appears in the *Introduction*.

The first publication, October 1980, of the final version of the List incorporated appropriate corrections and additions. Each subsequent edition has included the latest approvals and data changes. A complete discussion of the background and basis of FDA's therapeutic equivalence evaluation policy was published in the *Federal Register* on January 12, 1979 (44 FR 2932). The final rule, which includes FDA's responses to the public comments on the proposal, was published in the *Federal Register* on October 31, 1980 (45 FR 72582).

On September 24, 1984, the President signed into law the Drug Price Competition and Patent Term Restoration Act. The new statute requires that FDA, among other things, make publicly available a list of approved drug products with monthly supplements. The 5th Edition of this publication and its monthly Cumulative Supplements was used to satisfy this requirement and to provide Agency guidance as it became available. The Addendum to this publication identifies drugs which qualify under the new statute for periods of exclusivity (during which Abbreviated New Drug Applications for those drugs may not be submitted or made effective by the Agency) and provides patent information concerning the listed drugs.

THE UNIVERSITY OF CHICAGO
DEPARTMENT OF POLITICAL SCIENCE
POLITICAL SCIENCE 301

1. The first part of the course will focus on the theoretical foundations of political science, including the study of power, authority, and the state. We will explore the works of classical and modern political theorists, such as Aristotle, Machiavelli, Hobbes, Locke, and Rousseau.

2. The second part of the course will examine the historical development of political systems and institutions. We will analyze the evolution of democracy, the rise of the nation-state, and the impact of globalization on international relations.

3. The third part of the course will address contemporary political issues and challenges. We will discuss the role of the media, the impact of technology on politics, and the challenges posed by climate change and terrorism.

4. The fourth part of the course will focus on comparative politics, examining the differences and similarities between political systems in different countries and regions. We will analyze the political culture, institutions, and processes of various nations.

5. The fifth part of the course will explore the role of the individual in politics, including the study of political behavior, social movements, and the impact of public opinion on policy-making.

6. The final part of the course will discuss the future of political science and the challenges facing the discipline. We will explore emerging areas of research and the importance of interdisciplinary approaches to the study of politics.

7. The course will also include a series of guest lectures by leading political scientists and practitioners. These lectures will provide students with insights into current research and policy debates in the field.

8. In addition to the lectures and readings, students will be required to participate in class discussions, write papers, and complete assignments. This hands-on approach will help students develop critical thinking and analytical skills.

9. The course is designed to provide students with a comprehensive understanding of political science and its applications. It will be particularly beneficial for students interested in careers in government, international relations, or public policy.

10. Finally, the course will emphasize the importance of civic engagement and the role of citizens in a democratic society. Students will be encouraged to apply their knowledge and skills to real-world political issues.

11. The course will also provide students with the opportunity to engage in research projects and internships. These experiences will help students gain practical experience and develop their research skills.

12. Overall, the course is designed to be a rigorous and challenging experience for students. It will provide them with the knowledge and skills necessary to succeed in the field of political science and to contribute to the betterment of society.

1. INTRODUCTION

1.1 Content and Exclusion

The List is comprised of three parts: approved prescription drug products with therapeutic equivalence evaluations, over-the-counter (OTC) drug products that require approved applications as a condition of marketing, and drug products approved by the Division of Blood and Blood Products under Section 505 of the Act. This publication also includes indices of prescription and OTC drug products by trade or established name and by applicant name (holder of the approved application); also a list of applicants' abbreviated name designations. In addition, a list of uniform terms is provided. An Addendum contains appropriate drug patent and exclusivity information for the Prescription, OTC, and Drug Products Approved Under Section 505 of the Act by the Division of Blood and Blood Products lists.

Previous editions of the publication have excluded OTC drug products and drug products approved in the Division of Blood and Blood Products because the main purpose of the publication was to provide information to states regarding FDA's recommendation as to which generic prescription drug products were acceptable candidates for drug product selection. With the passage of the Drug Price Competition and Patent Term Restoration Act of 1984, the Agency now has the responsibility to publish an up-to-date list of all marketed drug products, OTC as well as prescription, that have been approved for safety and efficacy and for which new drug applications are required. There are some drugs for which there are both approved and unapproved OTC drug products in the market place. This situation occurs as a result of the Agency's current OTC compliance policy which allows the marketing of various unapproved OTC drug products pending the effective date of the applicable final OTC monograph. The OTC products included in the OTC Drug Product list of this publication are limited to those for which approved applications are currently required as a condition of marketing. All prescription drug products accepted and approved by the Division of Blood and Blood Products under Section 505 of the Act as NDAs can now be found in this publication. An ANDA may be submitted for marketing of drugs from this group.

As a general rule, the distributors of the products on the List are not identified. Because there is no requirement to immediately notify FDA when distributors shift their source of supply, it is not possible to main-

tain up-to-date and complete information linking the products of approved applications with distributors and relabelers handling those products.

1.2 Therapeutic Equivalence-related Terms

Pharmaceutical Equivalents—Drug products are considered to be pharmaceutical equivalents if they contain the same active ingredients and are identical in strength or concentration, dosage form, and route of administration (e.g., chlorthalidone hydrochloride, 5mg oral capsules). Pharmaceutically equivalent drug products are formulated to contain the same amount of active ingredient in the same dosage form and to meet the same or comparable standards (i.e., strength, quality, purity, and identity), but they may differ in characteristics such as color, flavor, shape, packaging, preservatives, expiration time, and, within certain limits, labeling.

Pharmaceutical Alternatives—Drug products are considered to be pharmaceutical alternatives if they contain the same therapeutic moiety but differ in the salt or ester of that moiety or in the dosage form or strength (e.g., tetracycline hydrochloride, 250mg capsules vs. tetracycline phosphate complex, 250mg capsules; quinidine sulfate, 200mg tablets, vs. quinidine sulfate, 200mg capsules). Different dosage forms and strengths within a product line by a single manufacturer are thus pharmaceutical alternatives, as are controlled-release products when compared with conventional formulations of the same active ingredient.

Therapeutic Equivalents—Drug products considered to be therapeutic equivalents are pharmaceutical equivalents and can be expected to have the same therapeutic effect when administered to patients under the conditions specified in the labeling. The concept of therapeutic equivalence, as used to develop the List, applies only to products containing the same active ingredients and does not encompass a comparison of different therapeutic agents used for the same condition (e.g., propoxyphene hydrochloride vs. pentazocine hydrochloride for the treatment of pain). FDA evaluates as therapeutically equivalent those products that meet the following general criteria: (1) they are pharmaceutical equivalents in that they (a) contain identical amounts of the same active drug ingredient in the same dosage form, and (b) meet compendial or other applicable standards of strength, quality, purity, and identity; (2) they are bioequivalent in that (a) they do not present a known or potential bioequivalence prob-

lem, or (b) if they do present such a known or potential problem, they are shown to meet an appropriate bioequivalence standard; (3) they are adequately labeled; and (4) they are manufactured in compliance with Current Good Manufacturing Practice regulations.

FDA considers drug products to be therapeutically equivalent if they meet the criteria outlined above, even though they may differ in certain other characteristics, e.g., color, flavor, packaging, preservatives, expiration time, and minor aspects of labeling (e.g., the presence of a specific indication). When such differences are important in the care of a particular patient, it is appropriate for the prescribing physician to require that a particular brand be dispensed as a medical necessity. As long as this consideration is met, however, FDA believes that products considered therapeutically equivalent can be substituted with the full expectation that the substituted product will produce the same therapeutic effect as the prescribed product.

Bioavailability—This term describes the rate and extent to which the active drug ingredient or therapeutic moiety is absorbed from a drug product and becomes available at the site of drug action.

Bioequivalence—This term describes the situation where pharmaceutically equivalent products display comparable bioavailability when studied under similar experimental conditions. Section 505 (j)(7)(B) of the Act describes bioequivalent drug products as those where:

the rate and extent of absorption of the drug do not show a significant difference from the rate and extent of absorption of the listed drug when administered at the same molar dose of the therapeutic ingredient under similar experimental conditions in either a single dose or multiple doses; or

the extent of absorption of the drug does not show a significant difference from the extent of absorption of the listed drug when administered at the same molar dose of the therapeutic ingredient under similar experimental conditions in either a single dose or multiple doses and the difference from the listed drug in the rate of absorption of the drug is intentional, is reflected in its proposed labeling, is not essential to the attainment of effective body drug concentrations on chronic use, and is considered medically insignificant for the drug.

Bioequivalence also may be demonstrated using an *in vitro* bioequivalence standard when such an *in vitro* test has been correlated with human *in vivo* bioavailability data.

1.3 General Policies and Legal Status

The List contains public information and advice. It does not constitute a recommendation as to which drug products persons should purchase, prescribe, dispense, or, conversely, which products should be avoided. To the extent that the List identifies drug products approved for marketing under Sections 505 and 507 of the Act, it merely sets forth information to which the Agency is required to publish and to which the public is entitled under the Freedom of Information Act. Exclusion of a drug product from the List does not necessarily mean that the drug product is in violation of Sections 505 or 507 of the Act, or that it is not safe or effective, or that it may not be therapeutically equivalent to other drug products. Rather, the exclusion is based on the fact that FDA has not evaluated the safety, effectiveness, and quality of the drug product. To the extent that the List sets forth FDA's evaluations of the therapeutic equivalence of drug products that have been approved, it contains FDA's advice to the public and to the states regarding an important public health matter. These evaluations do not constitute determinations that any products are in violation of the Act or that any products are preferable to others.

1.4 Practitioner's Responsibilities

There is a need to exercise professional care and performance in using the List. Evaluations of therapeutic equivalence for prescription drugs are based on scientific and medical evaluations by FDA. Products evaluated as therapeutically equivalent can be expected, in the judgment of the FDA, to have equivalent therapeutic effect and equivalent potential for adverse effects when used under the conditions of their labeling. However, these products may differ in other characteristics such as color, flavor, shape, packaging, preservatives, expiration date, and, in some instances, labeling. If such products are substituted for each other, there is a potential for such problems as patient confusion due to differences in color or shape of tablets, less patient acceptance of certain products because of flavor, better stability of one product over another under adverse conditions of storage, allergic reactions in rare cases due to a coloring or a preservative ingredient, as well as differences in purchase price to the patient. An FDA evaluation of therapeutic equivalence in no way relieves practitioners of their professional responsibilities in prescribing and dispensing such products with due care and with appropriate information to individual patients. In those uncommon circumstances where the characteristics of a specific product, other than its active ingredient, are

important in the therapy of a particular patient, the physician's specification of that product is appropriate. Pharmacists must also be familiar with the expiration dates and labeling conditions for storage, particularly for reconstituted products, to assure that patients are properly advised when one product is substituted for another.

Multisource and single-source drug products. FDA has evaluated for therapeutic equivalence only multisource prescription drug products, which in virtually all instances means those pharmaceutical equivalents available from more than one manufacturer. For such products a therapeutic equivalence code is included and, in addition, product information is highlighted in bold face and underlined. Those products with approved applications that are single-source (i.e., there is only one approved product available for that active ingredient and dosage form) are also included on the List, but no therapeutic equivalence code is included with such products. The details of these codes and the policies underlying them are discussed in Section 1.5.

When FDA is aware of new information concerning a multisource prescription drug product that causes its therapeutic equivalence evaluation to change, the designation will be changed in the next monthly Cumulative Supplement.

Products on the List are identified by the names of the holders of approved applications (applicants) rather than by the names of the actual manufacturers themselves. This is because the applicant may have had its product manufactured by a contract manufacturer and may simply be distributing the product for which it has obtained approval. In most instances, however, the manufacturer of the product is the applicant.

Although the products on the List are identified by the names of the applicants, circumstances, such as changing corporate profiles, have made this determination a difficult one. The Agency believes that, based on intensive and continuing document reviews and on concurrence through communication with firms, the applicant designations on the List, in most cases, are correct.

In order to relate firm and product identity information on a product label to that on the List, the following should be noted. If the applicant (firm name in the NDA) is the marketer (firm name on the label), that name appears on the List. If the applicant is not the marketer, and the Agency is aware of a corporate relationship between the applicant and the marketer, the name of the marketer and the trade name (proprietary name) of the drug product (established name if no trade name exists) appear on the List. If the applicant is not the marketer, and the Agency is unaware of a corporate relationship, the applicant's name and the established name appear on the List.

As a general rule, the products on the List are not identified by distributors' names. Products subject to an approved application are frequently manufactured for marketing by distributors under their own labeling. Even if FDA were to attempt to expand the List to link distributors with applicants, FDA would not have ready access to the necessary information. This is because there is no requirement that an applicant notify FDA when distributors shift their source of supply in the commercial marketplace.

Every product on the List is subject at all times to regulatory action. From time to time, approved products may be found in violation of one or more requirements of the Act. In such circumstances, the Agency will commence appropriate enforcement action to correct the violation, if necessary, by removing the product from the market by voluntary recall, seizure, or other enforcement actions. Such regulatory actions are however, independent of the inclusion of a product on the List. The sole criterion for inclusion of a product is its being the subject of an approved application that has not been withdrawn for safety or efficacy reasons. FDA believes that retention of a violative product on the List will not have any significant adverse health consequences because other legal mechanisms are available to the Agency to prevent its actual marketing.

1.5 Therapeutic Equivalence Evaluations Codes

The two-letter coding system for therapeutic equivalence evaluations is constructed to allow users to determine quickly whether the Agency has evaluated a particular approved product as therapeutically equivalent to other pharmaceutically equivalent products (first letter) and to provide additional information on the basis of FDA's evaluations (second letter).

The two basic classification categories into which multisource drugs have been placed are indicated by the first letter as follows:

A—Drug products that FDA considers to be therapeutically equivalent to other pharmaceutically equivalent products, i.e.:

- (1) No known or suspected bioequivalence problems (designated **AA**, **AN**, **AO**, **AP**, or **AT**, depending on the dosage form); and
- (2) Actual or potential bioequivalence problems resolved with adequate *in vivo* and/or *in vitro* evidence supporting bioequivalence (designated **AB**).

B—Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products, i.e.:

Actual or potential bioequivalence problems unresolved by adequate evidence of bioequivalence (designated **BC, BD, BE, BN, BP, BR, BS, BT, or BX**). Often the problem is among specific dosage forms rather than with the active ingredients.

Individual drug products have been evaluated as therapeutically equivalent in accordance with the definitions and policies outlined below:

A

Drug products that are considered to be therapeutically equivalent to other pharmaceutically equivalent products.

Drug products designated with an "A" code fall under one of two main policies:

- (1) For those active ingredients for which no bioequivalence issue is known or suspected, the therapeutic equivalence of pharmaceutically equivalent products is presumed, so long as the products are manufactured in accordance with Current Good Manufacturing Practice regulations and meet the other requirements of their approved applications (these are designated **AA, AN, AO, AP, or AT**, depending on the dosage form, as described below); and
- (2) for those DESI drug products containing active ingredients which have been identified by FDA as having actual or potential bioequivalence problems [21 CFR 320.22 or January 7, 1977 (42 FR 1648); revised July 14, 1981] and for post-1962 drug products, an evaluation of therapeutic equivalence is assigned to pharmaceutical equivalents only if the approved NDA contains adequate scientific evidence supporting the bioequivalence of the product to a selected standard product. This evidence may be an *in vivo* bioavailability study or an *in vitro* dissolution rate study or both, depending upon the drug (these products are designated **AB**).

There are some general principles which may affect the substitution of pharmaceutically equivalent products in some specific cases. Prescribers and dispensers of drugs should be alert to these principles so as to deal appropriately with situations which require professional judgment and discretion.

There may be labeling differences among pharmaceutically equivalent products which require attention on the part of the health professional. For example, pharmaceutically equivalent powders to be reconstituted for administration as oral or injectable liquids may vary with respect to their expiration time or storage conditions after reconstitution. An FDA evaluation that such products are therapeutically equivalent is applicable only when such products are reconstituted, stored, and used under the conditions specified in the labeling of each product.

Occasionally there may be variations among pharmaceutically equivalent products in their use or labeling instructions on dose and administration. For example, a particular brand of an antibiotic might require administration on an empty stomach, while another brand might permit administration without regard to food intake on the basis of blood level studies done after administration in the presence of food. An FDA evaluation of therapeutic equivalence in such cases is applicable only when such products are taken in accordance with labeling directions.

In some cases, closely related products are listed as containing the same active ingredients but in somewhat different amounts. In determining which of these products are pharmaceutically equivalent, the Agency has employed a criterion that products with labeled strengths of an ingredient that do not vary by more than 1% will be considered pharmaceutically equivalent.

Different salts and esters of the same therapeutic moiety are regarded as pharmaceutical alternatives. Such products are not considered to be therapeutically equivalent. There are no known instances in this List where pharmaceutical alternatives are coded as therapeutically equivalent. Anhydrous and hydrated entities are not considered as pharmaceutical equivalents unless they meet the same standards and, as in the case of ampicillin, their equivalence is supported by appropriate bioavailability/bioequivalence studies where necessary.

Drug products that are solids for reconstitution, diluted solutions, or concentrated solutions, and that contain different concentrations of active ingredients, are not considered pharmaceutical equivalents. Of course, the exercise of accepted professional practice may render pharmaceutically different concentrations into pharmaceutical equivalents (e.g., concentrated solutions may be diluted to lower strengths by using pro-

per procedures designed to maintain the quality of the product).

Where package size variations have therapeutic implications, products so packaged have not been considered pharmaceutically equivalent. For example, some oral contraceptives are supplied in 21-tablet and 28-tablet packets; the 28-tablet packets contain 7 placebo or iron tablets. These two packaging configurations are not regarded as pharmaceutically equivalent; thus, they are not designated as therapeutically equivalent.

Preservatives may differ among some therapeutically equivalent drug products. FDA's evaluations of therapeutic equivalence does not consider preservatives or other inactive ingredients.

The specific sub-codes for those drugs evaluated as therapeutically equivalent and the policies underlying these follow:

AA

Products not presenting bioequivalence problems in conventional dosage forms

Products coded as **AA** are active ingredients and dosage forms that are not regarded as presenting either actual or potential bioequivalence problems or drug quality or standards issues. However, all solid oral dosage forms must meet an appropriate *in vitro* test for approval.

AB

Products meeting necessary bioequivalence requirements

The **AB** evaluation denotes products that contain an active ingredient in a dosage form that is subject to a bioequivalence requirement, or for which the submission of bioavailability or clinical data is required for approval or to permit therapeutic equivalence evaluations, and for which the applicant has provided adequate studies to support the bioavailability and bioequivalence of its product. Products will be coded **AB** if bioequivalence is demonstrated even if the study currently is not required for approval. This category also includes those few drugs with more than one applicant but only one manufacturer. It should be noted that if only one product under a drug ingredient heading is coded **AB**, it signifies that only that product is supported by bioavailability data. It does not signify that this product is therapeutically equivalent to the other drugs under the same heading. Thus, one product of a drug ingredient heading, coded

AB, is not therapeutically equivalent to a drug product under the same heading that is coded **BD**, **BP**, or **BT**. Only those drugs coded **AB** under the ingredient heading are considered therapeutically equivalent to each other.

AN

Solutions and powders for aerosolization

Uncertainty regarding the therapeutic equivalence of aerosolized products arises primarily because of differences in the drug delivery system. Powders or solutions for aerosolization which are marketed for use in any of several delivery systems are considered to be pharmaceutically and therapeutically equivalent and are coded **AN**. Those products compatible only with, or which are a component of, a specific delivery system are classified **BN**, because drug products in their respective delivery systems are not necessarily pharmaceutically equivalent and therefore not therapeutically equivalent.

AO

Injectable oil solutions

The absorption of drugs in injectable (parenteral) oil solutions may vary substantially with the type of oil employed as a vehicle and the concentration of the active ingredient. Injectable oil solutions are therefore considered to be pharmaceutically and therapeutically equivalent only when the active ingredient, its concentration, and the type of oil used as a vehicle all are identical.

AP

Injectable aqueous solutions

All injectable (parenteral) products are listed under the general category *Injectable; Injection*, but specific routes of administration are not shown. Some multisource products that are pharmaceutical equivalents are labeled by their different applicants for different routes of administration. Moreover, injectable products evaluated as therapeutically equivalent may have different preservatives. Injectable products available as dry powders for reconstitution, concentrated sterile solutions for dilution, or sterile solutions ready for injection, are all considered to be pharmaceutically and therapeutically equivalent provided they are designed to produce the same con-

centration for injection and are similarly labeled. Consistent with accepted professional practice, it is the responsibility of the prescriber, dispenser, or individual administering the product to be familiar with a product's labeling to assure that it is given only by the route(s) of administration stated in the labeling.

Certain commonly used large volume intravenous products in glass containers are not included on the List (e.g., dextrose injection 5%, dextrose injection 10%, sodium chloride injection 0.9%). Virtually all of these products first came on the market before 1938 and have not been required to obtain an approved NDA as a condition of marketing. When packaged in plastic containers, however, these same products are considered to be new drugs requiring approved NDAs for marketing. Approval then relies on the extent of the available safety data involving the specific plastic component of the product. All large volume parenteral products are manufactured under similar standards, regardless of whether they are packaged in glass or plastic. Thus, FDA has no reason to believe that the packaging container of large volume parenteral drug products that are pharmaceutically equivalent would have any effect on their therapeutic equivalence.

AT

Topical products

There are a variety of topical dosage forms available for dermatologic, ophthalmic, otic, rectal, and vaginal administration, including solutions, creams, ointments, gels, lotions, pastes, sprays, and suppositories. Even though different topical dosage forms may contain the same active ingredient and potency, these dosage forms are not considered pharmaceutically equivalent; therefore, they are not considered therapeutically equivalent. In the absence of contrary data, all DESI drug products in the same topical dosage form are considered therapeutically equivalent if they are pharmaceutically equivalent. However, applicants of post-1962 topical drug products either demonstrate the safety and efficacy of their product through clinical trials or through a bioequivalence study in order to be evaluated as therapeutically equivalent. Pharmaceutically equivalent topical products which raise questions of bioequivalence will be coded **AB** when supported by adequate bioavailability data and **BT** in the absence of such data.

B

Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products.

Certain multisource drugs appearing on the List have been classified with a "B" code for several reasons. One reason is exemplified by those active ingredients and dosage forms that have been identified by the Agency as having significant potential or actual bioequivalence differences and for which no adequate studies demonstrating the bioequivalence of the particular product have been submitted to FDA. Certain dosage forms, e.g., controlled-release tablets, controlled-release capsules, and controlled-release injections frequently result in significant differences between products irrespective of active ingredients; and therefore, are classified in the "B" category. A "B" evaluation often is associated with bioequivalence problems concerning comparability among specific dosage forms rather than problems with the active ingredient (e.g., controlled-release dosage forms). In addition, there are currently a few products for which the standards are inadequate or for which FDA has insufficient information to determine if they are therapeutically equivalent.

The specific coding definitions and policies for the "B" sub-codes are as follows:

BC

Controlled-release tablets, controlled-release capsules, and controlled-release injectables

Although bioavailability studies have been conducted on these dosage forms, they are subject to bioavailability differences, primarily because firms developing controlled-release products for the same active ingredient rarely employ the same formulation approach. FDA, therefore, does not evaluate different controlled-release dosage forms containing the same active ingredient in equal strength as bioequivalent unless equivalence between individual products has been specifically demonstrated through appropriate bioequivalence studies. Controlled-release products for which acceptable bioequivalence data are available have been coded **AB**.

BD

Active ingredients and dosage forms with documented bioequivalence problems

The **BD** code denotes products containing active ingredients with known bioequivalence problems and for which adequate studies have not been submitted to FDA demonstrating bioequivalence. Where such studies are available, the product has been coded **AB**.

BE

Enteric-coated oral dosage forms

Drug products in enteric-coated dosage forms containing the same active ingredients are subject to significant differences in absorption. In general, such products cannot be considered pharmaceutically equivalent because they do not necessarily meet similar standards, and few manufacturers of enteric-coated products have studied the pharmacokinetics of their products. Unless otherwise specifically noted, the Agency does not consider different enteric-coated products containing the same active ingredients as bioequivalent. If studies have demonstrated the bioequivalence of enteric-coated products, such products are coded **AB**.

BN

Products in aerosol-nebulizer drug delivery systems

This code applies to drug solutions or powders that are marketed only as a component of or are compatible with a specific drug delivery system. There may be significant differences, for example, in the dose of drug and particle size delivered by different products. Therefore, such products are not regarded as pharmaceutically equivalent.

BP

Active ingredients and dosage forms with potential bioequivalence issues

FDA's bioequivalence regulations (21 CFR 320.52) contain criteria and procedures for determining whether a specific active ingredient in a specific dosage form has a potential for causing a bioequivalence problem. It is FDA's policy to consider an ingredient meeting these criteria as having a potential bioequivalence problem even

in the absence of positive data demonstrating inequivalence. Pharmaceutically equivalent products containing these ingredients in oral dosage forms are included in this category pending resolution of their bioequivalence or lack of it.

Injectable suspensions containing an active ingredient suspended in an aqueous or oleaginous vehicle have also been included in this subcategory. Injectable suspensions are subject to bioequivalence problems because differences in particle size, polymorphic structure of the suspended active ingredient, or the suspension formulation can significantly affect the rate of release and absorption. FDA does not consider pharmaceutical equivalents of these products as being bioequivalent without adequate evidence of bioequivalence.

BR

Suppositories or enemas for systemic use

The absorption of active ingredients from suppositories or enemas that are intended to have a systemic effect (as contrasted with suppositories administered for local effect) can vary significantly from product to product. Therefore, FDA considers pharmaceutically equivalent systemic suppositories or enemas as bioequivalent only if positive evidence of bioequivalence is available. In those cases where positive evidence is available, the product is coded **AB**. If such evidence is not available, the products are coded **BR**.

BS

Products having drug standard deficiencies

If the drug standards for an active ingredient in a particular dosage form are found by FDA to be deficient so as to prevent an FDA evaluation of either pharmaceutical or therapeutic equivalence, all drug products containing that active ingredient in that dosage form are coded **BS**. For example, if the standards permit a wide variation in pharmacologically active components of the active ingredient such that pharmaceutical equivalence is in question, all products containing that active ingredient in that dosage form are coded **BS**.

BT

Topical products with bioequivalence issues

This code applies mainly to post-1962 derma-

tologic, ophthalmic, otic, rectal, and vaginal products for topical administration, including creams, ointments, gels, lotions, pastes, and sprays, as well as suppositories not intended for systemic drug absorption. Topical products evaluated as having acceptable performance, but which are not bioequivalent to other pharmaceutically equivalent products or those lacking sufficient evidence of bioequivalence will be coded **BT**.

BX

Insufficient data

The code **BX** is assigned to specific drug products for which the Agency has insufficient data to determine the therapeutic equivalence status under the policies stated in this document. In these situations the drug products are presumed to be inequivalent until adequate information becomes available to make a full evaluation of therapeutic equivalence.

1.6 Description of Special Situations

Certain drugs present special situations that deserve a more complete explanation than can be provided by the two-letter codes used in the List. These drugs have particular problems with standards of identity, analytical methodology, or bioequivalence issues that are in the process of resolution. The following are in this category:

Erythromycin Stearate Tablets—All manufacturers of erythromycin stearate tableted products demonstrated product bioequivalency as a condition of application approval. These bioequivalence studies were performed under fasting conditions; and, as a result, all firms were required to label their products to be taken on an empty stomach. Since that time some firms have demonstrated that their products may be taken immediately before meals, but not with meals, and still achieve acceptable blood levels. On the basis of such studies, FDA has approved those products to be labeled accordingly. At the same time, the Agency stresses that optimal absorption for any erythromycin stearate tablet is achieved when the drug is administered under fasting conditions and recommends that prescriptions include instructions regarding administration in relation to meals. When erythromycin stearate tablets are to be administered under fasting conditions, the Agency believes that any listed product coded **AB** may be considered therapeutically equivalent. If erythromycin stearate is to be taken immediately before meals, only those products with labeling that provides for such administration should be dis-

pensed. Erythromycin stearate tableted products have been designated therapeutically equivalent (**AB**) in the List because all of the products produce equivalent blood levels provided the drug is prescribed and administered in accordance with the conditions of use in the labeling. Prescribers and dispensers are advised to be familiar with the labeling of these products.

Amino Acid and Protein Hydrolysate Injections—These products differ by the amount and kinds of amino acids they contain and therefore are not considered pharmaceutical equivalents. Thus, it is on this basis that FDA cannot evaluate these products as therapeutic equivalents. At the same time, the Agency believes that it is appropriate to point out that where nitrogen balance is the sole therapeutic objective and individual amino acid content is not a consideration, pharmaceutical alternative products with the same total amount of nitrogen content may be considered as therapeutically equivalent.

Prednisone Tablets—Because of known bioinequivalence and therapeutic inequivalence, the USP has adopted an *in vitro* dissolution test correlated with *in vivo* bioequivalence data. All products have been subject to a voluntary batch-to-batch certification program over the last several years to assure that products are in compliance with the USP dissolution requirement. Based on *in vivo* studies, FDA has published a proposal to establish the USP dissolution requirement as the bioequivalence requirement for prednisone tableted products. Additional studies have been completed and determination of therapeutic equivalence awaits their evaluation. Until then, all prednisone products are coded **BX**.

Prednisolone Tablets—Although FDA-sponsored biopharmaceutic studies of prednisolone tablets have not revealed product bioinequivalence, a determination of the therapeutic equivalence of prednisolone tablets will not be made at present because of the close similarities between prednisolone and prednisone. Based on *in vivo* and *in vitro* studies, FDA has published a proposal to establish the dissolution requirement as the bioequivalence requirement for prednisolone tableted products. Determination of therapeutic equivalence will be considered following evaluation of the prednisone studies. Until then, all prednisolone products are coded **BX**.

Theophylline—Recent studies suggest that food may significantly alter the absorption of theophylline from some controlled-release theophylline drug products. Research is ongoing to define more precisely the relationship between the timing of meals (including type and amount of food) and the rate and extent of absorption of theophylline from the controlled-release dosage form. Until this issue is resolved, those approved controlled-release theophylline drug products

which have demonstrated through bioavailability studies that food does not have an appreciable effect on the rate and extent of theophylline absorption will be identified in the Special Notes section of the Cumulative Supplement.

Two controlled-release theophylline tablets are listed as therapeutically equivalent (**AB**). Because one of these products is approved for once-daily dosing, it is important to be aware that the therapeutic equivalence rating was made on the basis of 12-hour dosing intervals. The rating does not apply to once-daily dosing. To date, no data have been submitted upon which the Agency can base a therapeutic equivalence determination among any of the approved theophylline controlled-release products when dosed once-daily.

1.7 Availability of the Publication and Updating Procedures

FDA provides monthly Cumulative Supplements to each annual edition, furnishing, among other things, new drug approval information and, if necessary, revised therapeutic equivalence evaluations and updated patent and exclusivity data. Since all parts of this publication are subject to changes, additions, or deletions, the List must be used in conjunction with the most current Cumulative Supplement.

An updated magnetic tape containing the Prescription Drug Product list, the OTC Drug Product list, the Drug Products Approved Under Section 505 of the Act by the Division of Blood and Blood Products list, and the Patent and Exclusivity Information Addendum is available quarterly by subscription from the U.S. Department of Commerce, National Technical Information Service, Springfield, VA 22161.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both manual and automated processes. The goal is to ensure that the data is as accurate and reliable as possible.

The third part of the document provides a detailed breakdown of the results. It shows that there is a clear trend in the data, which is consistent with the initial hypothesis. This finding is significant as it provides strong evidence for the proposed model.

Finally, the document concludes with a summary of the key findings and a list of recommendations for future research. It suggests that further studies should be conducted to explore the underlying causes of the observed trends.

The second part of the document focuses on the implementation of the proposed system. It details the steps taken to integrate the new software with the existing infrastructure. This process involved extensive testing and collaboration with the IT department.

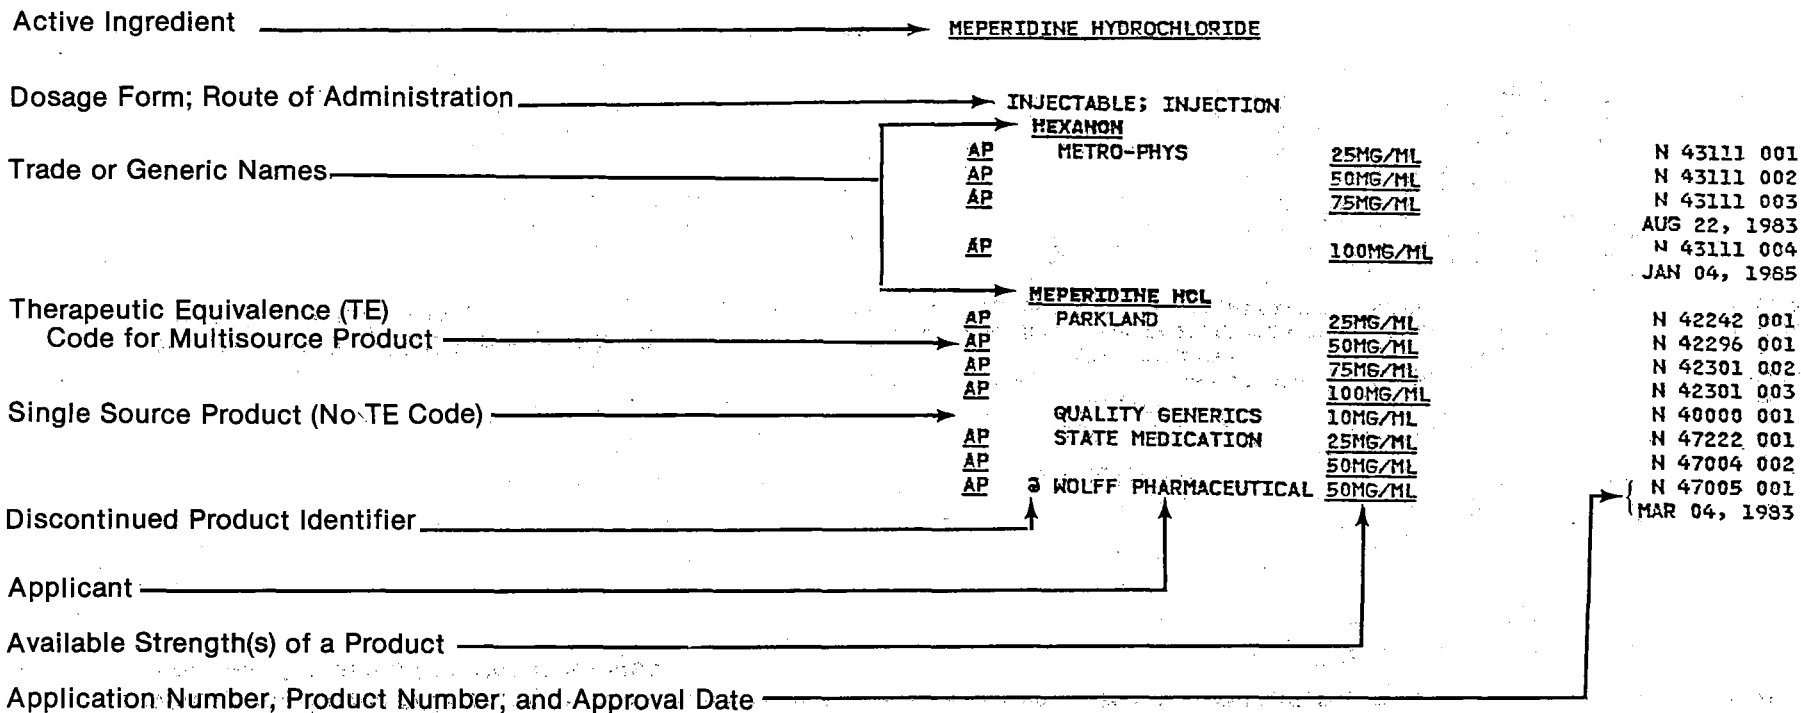

The third section describes the challenges encountered during the implementation phase. One major issue was the lack of user training, which led to several errors in data entry. To address this, a comprehensive training program was developed and rolled out to all staff members.

The fourth part of the document presents the results of the implementation. It shows that the new system has significantly improved the efficiency of the data collection process. There has been a noticeable reduction in the time required to generate reports, and the accuracy of the data has increased.

The document concludes by highlighting the overall success of the project. It states that the implementation of the new system has met the objectives set at the beginning of the project. The organization is now better equipped to handle its data, and the proposed model has been validated through practical application.

2.2 DRUG PRODUCT ILLUSTRATION

Single Ingredient

22

Multiple Ingredients

With Product Information

With Cross-Reference

This example is for purposes of illustration only. It does not represent actual products from the Prescription Drug Product list.

2. HOW TO USE THE DRUG PRODUCT LISTS

2.1 Key Sections for Using the Drug Product Lists

This publication contains the Drug Product Lists, along with illustrations, indices, and lists of abbreviations and terms which facilitate its use.

Drug Product Lists. The Drug Product Lists, arranged alphabetically by active ingredient, contain product identification information (active ingredients, dosage forms, routes of administration, product names, applicants, strengths) for single and multiple ingredient drug products. Also shown is the application number and product number (FDA's file numbers) and approval dates for those products approved January 1, 1982, and thereafter.

If a prescription product is available from more than one source (multisource), a therapeutic equivalence code will appear in front of the applicant's name. If a product is therapeutically equivalent to one or more products or to an appropriate reference, it will be designated with a code beginning with "A" and the entry will be underlined and printed in bold font for emphasis.

Active ingredients in multiple ingredient (combination) products are arranged alphabetically. For example, product information for the product labeled methyl dopa and chlorothiazide appears listed under *Chlorothiazide; Methyl dopa*. A cross-reference to the product information (for prescription and OTC products) appears for each additional active ingredient in the product. For combination products, the ingredient strengths are separated by semicolons and appear in the same relative sequence as the ingredients in the heading. Available strengths of the dosage form from an applicant appear on separate lines.

Products discontinued from marketing will be flagged in this and future editions of this publication with the "D" symbol to designate their non-marketed status.

To use the Drug Product Lists, determine the ingre-

redient under which the product information is listed, using the Product Name Index if appropriate. Then, find the ingredient in the applicable Drug Product List. Proceed to the dosage form and route of administration and compare products within that ingredient heading only. Therapeutic equivalence or inequivalence for prescription products is determined on the basis of the therapeutic equivalence codes provided within that specific dosage form heading.

Illustrations. The annotated "Drug Product Illustration" and "Therapeutic Equivalence Evaluations Illustration" are offered to provide further clarification. These depict the format found in the Prescription Drug Product list, the only list in which therapeutic equivalence evaluation codes are found. The OTC and the Drug Products Approved Under Section 505 of the Act by the Division of Blood and Blood Products lists have their data arranged similarly.

Product Name Index (prescription and OTC drug products). This is an index of products by established or trade name. The second term of each entry indicates the ingredient under which product information can be found in the appropriate Drug Product List. OTC products are so designated.

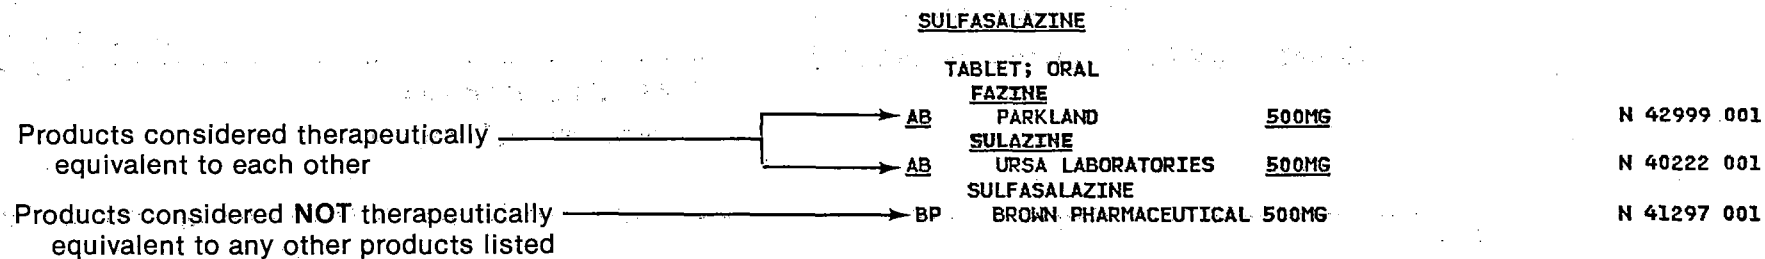

Product Name Index Listed by Applicant (prescription and OTC drug products). This is an index that cross-references applicants to products. The second term of each entry indicates the first alphabetically arranged ingredient under which product information can be found in the appropriate Drug Product List. OTC products are so designated.

Applicant Name Abbreviations. This is a list of the applicant name abbreviations used in this publication.

Uniform Terms. In order to improve readability, uniform terms are used to designate dosage forms, routes of administration, and abbreviations used to express strengths. These terms are listed in *Appendix D*. In some cases, the terms used may differ from those used in product labels and other labeling.

2.3 THERAPEUTIC EQUIVALENCE EVALUATIONS ILLUSTRATION

Drug products coded **AB** (or any code beginning with an "A") under an ingredient and dosage form heading are considered therapeutically equivalent only to other products coded **AB** (or any code beginning with an "A") and **NOT** to those coded **BP** (or any code beginning with a "B") and any products not listed. Drug products coded **BP** (or any code beginning with a "B") are **NOT** considered therapeutically equivalent to any other product. For a complete explanation of the TE codes refer to Section 1.5 of the *Introduction*.

2-3

NOTE: Bold font and underlining denotes multisource products which are considered therapeutically equivalent.

This example is for purposes of illustration only. It does not represent actual products from the Prescription Drug Product list.

DIPHENOXYLATE HCL AND ATROPINE SULFATE, ATROPINE SULFATE
DOXYCYCLINE HYCLATE, DOXYCYCLINE HYCLATE
ERGOLOID MESYLATES, ERGOLOID MESYLATES
ERYTHROMYCIN ESTOLATE, ERYTHROMYCIN ESTOLATE
ERYTHROMYCIN ETHYLSUCCINATE, ERYTHROMYCIN ETHYLSUCCINATE
ERYTHROMYCIN STEARATE, ERYTHROMYCIN STEARATE
FUROSEMIDE, FUROSEMIDE
HYDRALAZINE HCL, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCODONE BITARTRATE W/ ACETAMINOPHEN, ACETAMINOPHEN
HYDROCORTISONE, HYDROCORTISONE
HYDROXYZINE HCL, HYDROXYZINE HYDROCHLORIDE
HYDROXYZINE PAMOATE, HYDROXYZINE PAMOATE
IBUPROFEN, IBUPROFEN
ISONIAZID, ISONIAZID
MEPERIDINE HCL, MEPERIDINE HYDROCHLORIDE
MEPROBAMATE, MEPROBAMATE
METHOCARBAMOL, METHOCARBAMOL
METRONIDAZOLE, METRONIDAZOLE
OXYCODONE HCL AND ACETAMINOPHEN, ACETAMINOPHEN
OXYCODONE W/ ASPIRIN, ASPIRIN
PHENDIMETRAZINE TARTRATE, PHENDIMETRAZINE TARTRATE
PREDNISOLONE, PREDNISOLONE
PREDNISON, PREDNISON
PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
PROPOXYPHENE HCL, PROPOXYPHENE HYDROCHLORIDE
PROPOXYPHENE NAPSYLATE AND ACETAMINOPHEN, ACETAMINOPHEN
PROPYLTHIOURACIL, PROPYLTHIOURACIL
QUINIDINE SULFATE, QUINIDINE SULFATE
RESERPINE, RESERPINE
RESERPINE AND HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
RESERPINE, HYDRALAZINE HCL AND HYDROCHLOROTHIAZIDE,
HYDRALAZINE HYDROCHLORIDE
SODIUM SECOBARBITAL, SECOBARBITAL SODIUM
SPIRONOLACTONE, SPIRONOLACTONE
SPIRONOLACTONE W/ HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
SULFAMETHOXAZOLE, SULFAMETHOXAZOLE
SULFAMETHOXAZOLE AND TRIMETHOPRIM, SULFAMETHOXAZOLE
SULFAMETHOXAZOLE AND TRIMETHOPRIM DOUBLE STRENGTH,
SULFAMETHOXAZOLE

APPENDIX B
PRODUCT NAME INDEX LISTED BY APPLICANT

B-9

SULFINPYRAZONE, SULFINPYRAZONE
SULFISOXAZOLE, SULFISOXAZOLE
TETRACYCLINE HCL, TETRACYCLINE HYDROCHLORIDE
THIORIDAZINE HCL, THIORIDAZINE HYDROCHLORIDE
TOLBUTAMIDE, TOLBUTAMIDE
TRIAMCINOLONE, TRIAMCINOLONE
TRIPLENNAMINE HCL, TRIPLENNAMINE HYDROCHLORIDE

BARTOR PHARMACAL

TESTOSTERONE, TESTOSTERONE

BAY LABORATORIES

ALLERBAN PLUS, PSEUDOEPHEDRINE HYDROCHLORIDE (OTC)
AMBAY, BROMODIPHENHYDRAMINE HYDROCHLORIDE
AMINOPHYLLINE, AMINOPHYLLINE
BAYAPAP W/ CODEINE, ACETAMINOPHEN
BAYCADRON, DEXAMETHASONE
BAYCODAN, HOMATROPINE METHYLBROMIDE
BAYIDYL, TRIPROLODINE HYDROCHLORIDE
BAYLARAMINE, DEXCHLORPHENIRAMINE MALEATE
BAYLOCAINE, LIDOCAINE HYDROCHLORIDE
BAYMETHAZINE FORTIS, PROMETHAZINE HYDROCHLORIDE
BIPHETANE DC, BROMPHENIRAMINE MALEATE
BIPHETANE DX, BROMPHENIRAMINE MALEATE
BIPHETAP, BROMPHENIRAMINE MALEATE
BROMBAY, BROMPHENIRAMINE MALEATE
BUTABARBITAL SODIUM, BUTABARBITAL SODIUM
CHLORPROMAZINE HCL, CHLORPROMAZINE HYDROCHLORIDE
CYPROHEPTADINE HCL, CYPROHEPTADINE HYDROCHLORIDE
DIPHEN, DIPHENHYDRAMINE HYDROCHLORIDE
FLUOCINOLONE ACETONIDE, FLUOCINOLONE ACETONIDE
HYDROCORTISONE, HYDROCORTISONE
HYDROXYZINE HCL, HYDROXYZINE HYDROCHLORIDE
LINDANE, LINDANE
NYSTATIN, NYSTATIN
OXTRIPHYLLINE, OXTRIPHYLLINE
OXTRIPHYLLINE PEDIATRIC, OXTRIPHYLLINE
PROCHLORPERAZINE EDISYLATE, PROCHLORPERAZINE EDISYLATE
PROMETHAZINE DM, DEXTROMETHORPHAN HYDROBROMIDE
PROMETHAZINE PLAIN, PROMETHAZINE HYDROCHLORIDE
PROMETHAZINE VC PLAIN, PHENYLEPHRINE HYDROCHLORIDE
PROMETHAZINE VC W/ CODEINE, CODEINE PHOSPHATE
PROMETHAZINE W/ CODEINE, CODEINE PHOSPHATE
PSEUDOCINE C, CODEINE PHOSPHATE
SELENIUM SULFIDE, SELENIUM SULFIDE
SODIUM POLYSTYRENE SULFONATE, SODIUM POLYSTYRENE SULFONATE

THEOPHYLLINE, THEOPHYLLINE
THIORIDAZINE HCL, THIORIDAZINE HYDROCHLORIDE
TRIAMCINOLONE ACETONIDE, TRIAMCINOLONE ACETONIDE
TRIFLUOPERAZINE HCL, TRIFLUOPERAZINE HYDROCHLORIDE
TRIMEPRAZINE TARTRATE, TRIMEPRAZINE TARTRATE

BEECHAM LABS/BEECHAM

AMINOPHYLLINE, AMINOPHYLLINE
AMOXIL, AMOXICILLIN
APOGEN, GENTAMICIN SULFATE
AUGMENTIN '125', AMOXICILLIN
AUGMENTIN '250', AMOXICILLIN
AUGMENTIN '500', AMOXICILLIN
BACTOCILL, OXACILLIN SODIUM
BEEPEN-VK, PENICILLIN V POTASSIUM
CLOXAPEN, CLOXACILLIN SODIUM
DYCILL, DICLOXACILLIN SODIUM
FASTIN, PHENTERMINE HYDROCHLORIDE
KLEBCIL, KANAMYCIN SULFATE
LAROTID, AMOXICILLIN
MENEST, ESTROGENS, ESTERIFIED
NALLPEN, NAFCILLIN SODIUM
PHYTONADIONE, PHYTONADIONE
PROBENECID AND COLCHICINE, COLCHICINE
PYOPEN, CARBENICILLIN DISODIUM
QUINIDINE SULFATE, QUINIDINE SULFATE
TICAR, TICARCILLIN DISODIUM
TIGAN, TRIMETHOBENZAMIDE HYDROCHLORIDE
TIMENTIN, POTASSIUM CLAVULANATE
TOTACILLIN, AMPICILLIN/AMPICILLIN TRIHYDRATE
TOTACILLIN-N, AMPICILLIN SODIUM

BEL-MAR LABORATORIES

CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CHORIONIC GONADOTROPIN, GONADOTROPIN, CHORIONIC
DEXAMETHASONE SODIUM PHOSPHATE, DEXAMETHASONE SODIUM PHOSPHATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
HYDROCORTISONE ACETATE, HYDROCORTISONE ACETATE
HYDROXOMIN, HYDROXOCOBALAMIN
LIDOCAINE HCL, LIDOCAINE HYDROCHLORIDE
LIDOCAINE HCL W/ EPINEPHRINE, EPINEPHRINE
M-PREDROL, METHYLPREDNISOLONE ACETATE
PREDNISOLONE ACETATE, PREDNISOLONE ACETATE
PROCAINE HCL, PROCAINE HYDROCHLORIDE
PROCAINE HCL W/ EPINEPHRINE, EPINEPHRINE
PYRIDAMAL 100, CHLORPHENIRAMINE MALEATE

APPENDIX B
PRODUCT NAME INDEX LISTED BY APPLICANT

B-10

PYRIDOXINE HCL, PYRIDOXINE HYDROCHLORIDE
RUBIVITE, CYANOCOBALAMIN
TESTOSTERONE PROPIONATE, TESTOSTERONE PROPIONATE

CARISOPRODOL, CARISOPRODOL
CHLOROTHIAZIDE, CHLOROTHIAZIDE
CHLOROTHIAZIDE W/ RESERPINE, CHLOROTHIAZIDE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CHLORPROPAMIDE, CHLORPROPAMIDE
CHLORTHALIDONE, CHLORTHALIDONE
CYPROHEPTADINE HCL, CYPROHEPTADINE HYDROCHLORIDE
DEXAMETHASONE, DEXAMETHASONE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
ERGOLOID MESYLATES, ERGOLOID MESYLATES
EXTENDED PHENYTOIN SODIUM, PHENYTOIN SODIUM, EXTENDED
FLUOXYMESTERONE, FLUOXYMESTERONE
FOLIC ACID, FOLIC ACID
GLYCOPYRROLATE, GLYCOPYRROLATE
GUANETHIDINE MONOSULFATE, GUANETHIDINE MONOSULFATE
HYDRALAZINE HCL AND HYDROCHLOROTHIAZIDE, HYDRALAZINE
HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCHLOROTHIAZIDE W/ HYDRALAZINE, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE W/ RESERPINE, HYDROCHLOROTHIAZIDE
HYDROCHLOROTHIAZIDE W/ RESERPINE AND HYDRALAZINE, HYDRALAZINE
HYDROCHLORIDE
HYDROFLUMETHIAZIDE, HYDROFLUMETHIAZIDE
HYDROFLUMETHIAZIDE W/ RESERPINE, HYDROFLUMETHIAZIDE
HYDROGENATED ERGOT ALKALOIDS, ERGOLOID MESYLATES
HYDROXYZINE PAMOATE, HYDROXYZINE PAMOATE
IMIPRAMINE HCL, IMIPRAMINE HYDROCHLORIDE
ISONIAZID, ISONIAZID
LIOTHYRONINE SODIUM, LIOTHYRONINE SODIUM
MECLIZINE HCL, MECLIZINE HYDROCHLORIDE
METHOCARBAMOL, METHOCARBAMOL
METHYCLOTHIAZIDE, METHYCLOTHIAZIDE
METHYCLOTHIAZIDE AND DESERPIDINE, DESERPIDINE
NIACIN, NIACIN
NITROFURANTOIN, NITROFURANTOIN
ORPHENADRINE CITRATE, ORPHENADRINE CITRATE
OXTRIPHYLLINE, OXTRIPHYLLINE
OXYPHENBUTAZONE, OXYPHENBUTAZONE
PRIMIDONE, PRIMIDONE
PROBENECID W/ COLCHICINE, COLCHICINE
PROCAINAMIDE HCL, PROCAINAMIDE HYDROCHLORIDE
PROCHLORPERAZINE, PROCHLORPERAZINE MALEATE
PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
PROPANTHELINE BROMIDE, PROPANTHELINE BROMIDE
PYRILAMINE MALEATE, PYRILAMINE MALEATE

QUINIDINE GLUCONATE, QUINIDINE GLUCONATE
SPIRONOLACTONE, SPIRONOLACTONE
SPIRONOLACTONE W/ HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
SULFAMETHOXAZOLE, SULFAMETHOXAZOLE
SULFASALAZINE, SULFASALAZINE
THIORIDAZINE HCL, THIORIDAZINE HYDROCHLORIDE
TRICHLORMETHIAZIDE, TRICHLORMETHIAZIDE
TRICHLORMETHIAZIDE W/ RESERPINE, RESERPINE
TRIHEXYPHENIDYL HCL, TRIHEXYPHENIDYL HYDROCHLORIDE
TRIPLENNAMINE HCL, TRIPLENNAMINE HYDROCHLORIDE
TRIPROLDINE AND PSEUDOEPHEDRINE, PSEUDOEPHEDRINE
HYDROCHLORIDE (OTC)
TRIPROLDINE HCL, TRIPROLDINE HYDROCHLORIDE
WARFARIN SODIUM, WARFARIN SODIUM

BOOTS LABORATORIES

BUTALBITAL W/ ASPIRIN & CAFFEINE, ASPIRIN

BOOTS PHARMACEUTICAL

ACETAMINOPHEN AND CODEINE PHOSPHATE, ACETAMINOPHEN

ACETAMINOPHEN W/ CODEINE, ACETAMINOPHEN
BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
H-CORT, HYDROCORTISONE
PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
THEOPHYLLINE, THEOPHYLLINE
TRIPROLIDINE HCL, TRIPROLIDINE HYDROCHLORIDE

PHOENIX LABORATORIES

AMINOPHYLLINE, AMINOPHYLLINE
BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
DEXAMETHASONE, DEXAMETHASONE
FOLIC ACID, FOLIC ACID
ISONIAZID, ISONIAZID
PREDNISOLONE, PREDNISOLONE
PREDNISONE, PREDNISONE
QUINIDINE SULFATE, QUINIDINE SULFATE

PHYSICIANS PRODS/ILC

HYSERPIN, RAUWOLFIA SERPENTINA

PIONEER PHARMS

BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE

CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CYPROHEPTADINE HCL, CYPROHEPTADINE HYDROCHLORIDE

PLANTEK/TKAPHARM

CLOMIPHENE CITRATE, CLOMIPHENE CITRATE

PRIVATE FORMULATIONS

ALLERFED, PSEUDOEPHEDRINE HYDROCHLORIDE
BENZTHIAZIDE, BENZTHIAZIDE
BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CHLORPROMAZINE HCL, CHLORPROMAZINE HYDROCHLORIDE
CONJUGATED ESTROGENS, ESTROGENS, CONJUGATED
DEXAMETHASONE, DEXAMETHASONE
DI-METREX, PHENDIMETRAZINE TARTRATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
DIPHENOXYLATE HCL W/ ATROPINE SULFATE, ATROPINE SULFATE
ESTERIFIED ESTROGENS, ESTROGENS, ESTERIFIED
FEMOGEN, ESTROGENS, ESTERIFIED
FOLIC ACID, FOLIC ACID
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
MEPROBAMATE, MEPROBAMATE
METHSCOPOLAMINE BROMIDE, METHSCOPOLAMINE BROMIDE
METHYLTESTOSTERONE, METHYLTESTOSTERONE
PHENDIMETRAZINE TARTRATE, PHENDIMETRAZINE TARTRATE
PREDNISOLONE, PREDNISOLONE
PREDNISONE, PREDNISONE
PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
PROPANTHELINE BROMIDE, PROPANTHELINE BROMIDE
PROPOXYPHENE HCL, PROPOXYPHENE HYDROCHLORIDE
QUINIDINE SULFATE, QUINIDINE SULFATE
RAUWOLFIA SERPENTINA, RAUWOLFIA SERPENTINA
RESERPINE, RESERPINE

PRO DISPOSABLES

HEXASCRUB, HEXACHLOROPHENE

PROCTER AND GAMBLE

OSTEOSCAN-HDP, TECHNETIUM, TC-99M, OXIDRONATE KIT
TOPICYCLINE, TETRACYCLINE HYDROCHLORIDE

PROTER LAB/ITALY

OXYTETRACYCLINE HCL, OXYTETRACYCLINE HYDROCHLORIDE

PURDUE FREDERICK

ATHROMBIN, WARFARIN SODIUM

APPENDIX B
PRODUCT NAME INDEX LISTED BY APPLICANT

B-42

ATHROMBIN-K, WARFARIN POTASSIUM
CARDIOQUIN, QUINIDINE POLYGALACTURONATE
CERUMENEX, TRIETHANOLAMINE POLYPEPTIDE OLEATE CONDENSATE
PHENY-PAS-TEBAMIN, PHENYL AMINOSALICYLATE
PHYLLLOCONTIN, AMINOPHYLLINE
PRIODERM, MALATHION
SULFABID, SULFAPHENAZOLE
THEOCONTIN, THEOPHYLLINE
UNIPHYL, THEOPHYLLINE

PUREPAC/KALIPHARMA

ACETAMINOPHEN W/ CODEINE PHOSPHATE, ACETAMINOPHEN
AMINOPHYLLINE, AMINOPHYLLINE
AMITRIPTYLINE HCL, AMITRIPTYLINE HYDROCHLORIDE
AMPICILLIN TRIHYDRATE, AMPICILLIN/AMPICILLIN TRIHYDRATE
ASPIRIN AND CAFFEINE W/ BUTALBITAL, ASPIRIN
BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
CHLORDIAZEPOXIDE HCL, CHLORDIAZEPOXIDE HYDROCHLORIDE
CHLOROQUINE PHOSPHATE, CHLOROQUINE PHOSPHATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CHLORPROMAZINE HCL, CHLORPROMAZINE HYDROCHLORIDE
CHLORTHALIDONE, CHLORTHALIDONE
CORTISONE ACETATE, CORTISONE ACETATE
DEXTROAMPHETAMINE SULFATE, DEXTROAMPHETAMINE SULFATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
DOXYCYCLINE HYCLATE, DOXYCYCLINE HYCLATE
ERYTHROMYCIN STEARATE, ERYTHROMYCIN STEARATE
FOLIC ACID, FOLIC ACID
HYDRALAZINE HCL, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCORTISONE, HYDROCORTISONE
HYDROCORTISONE ACETATE, HYDROCORTISONE ACETATE
HYDROXYZINE HCL, HYDROXYZINE HYDROCHLORIDE
ISONIAZID, ISONIAZID
MEPROBAMATE, MEPROBAMATE
METHOCARBAMOL, METHOCARBAMOL
METHYLTESTOSTERONE, METHYLTESTOSTERONE
NIACIN, NIACIN
OXYTETRACYCLINE HCL, OXYTETRACYCLINE HYDROCHLORIDE
PENICILLIN G POTASSIUM, PENICILLIN G POTASSIUM
PENICILLIN V POTASSIUM, PENICILLIN V POTASSIUM
PREDNISOLONE, PREDNISOLONE
PREDNISONE, PREDNISONE
PROPOXYPHENE HCL, PROPOXYPHENE HYDROCHLORIDE
PROPYLTHIOURACIL, PROPYLTHIOURACIL
QUINIDINE SULFATE, QUINIDINE SULFATE

RAUWOLFIA SERPENTINA, RAUWOLFIA SERPENTINA
RESERPINE, RESERPINE
SECOBARBITAL SODIUM, SECOBARBITAL SODIUM
SODIUM PENTOBARBITAL, PENTOBARBITAL SODIUM
SPIRONOLACTONE, SPIRONOLACTONE
SPIRONOLACTONE W/ HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
SULFISOXAZOLE, SULFISOXAZOLE
TETRACYCLINE HCL, TETRACYCLINE
TETRACYCLINE HCL, TETRACYCLINE HYDROCHLORIDE
TOLBUTAMIDE, TOLBUTAMIDE
TRIAMCINOLONE, TRIAMCINOLONE
TRIPLE SULFA, TRISULFAPYRIMIDINES

** Q **

QUANTUM PHARMICS

BENZTROPINE MESYLATE, BENZTROPINE MESYLATE
BUTALBITAL ASPIRIN AND CAFFEINE, ASPIRIN
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CLOPRA, METOCLOPRAMIDE HYDROCHLORIDE
CORTISONE ACETATE, CORTISONE ACETATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
DOXYLAMINE SUCCINATE, DOXYLAMINE SUCCINATE
HYDRALAZINE HCL, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCORTISONE, HYDROCORTISONE
MEPROBAMATE, MEPROBAMATE
MEPROGESIC Q, ASPIRIN
NITROFURANTOIN, NITROFURANTOIN
NYSTATIN, NYSTATIN

PATENT AND EXCLUSIVITY INFORMATION ADDENDUM

This Addendum identifies drugs which qualify under the Drug Price Competition and Patent Term Restoration Act of 1984 for periods of exclusivity (during which ANDAs and paper NDAs for those drugs may not be submitted or made effective as identified below) and provides patent information concerning the listed drugs. Exclusivity prevents the filing and/or effective approval of ANDAs or paper NDAs. It does not prevent the filing or approval of a second full NDA. Applications qualifying for periods of exclusivity are:

- (1) A new drug application approved between January 1, 1982 and September 24, 1984, for a drug product all active ingredients (including any ester or salt of the active ingredient) of which had never been approved in any other application. Approval of an ANDA or paper NDA for the same drug may not be *made effective* for a period of *ten years* from the date of the approval of the original application.
- (2) A new drug application approved after September 24, 1984, for a drug product all active ingredients (including any ester or salt of the active ingredient) of which had never been approved in any other new drug application. Generally, no subsequent ANDA or paper NDA for the same drug may be *submitted* for a period of *five years* from the date of approval of the original application, except that such an application may be submitted after *four years* if it contains a certification that a patent claiming the drug is invalid or will not be infringed by the product for which approval is sought.
- (3) A new drug application approved after September 24, 1984, for a drug product involving an active ingredient (or any ester or salt of that active ingredient) that has been approved in an earlier new drug application and which includes reports of new clinical investigations (other than bioavailability studies). Such investigations must have been conducted or sponsored by the applicant or for which the applicant had a right of reference, and the investigations must have been essential to approval of the application. If these requirements are met, the approval of a subsequent ANDA or paper NDA may not be made effective for the same drug before the expiration of *three years* from the date of approval of the original application.
- (4) A supplement to a new drug application approved after September 24, 1984, which contains reports of new clinical investigations (other than bioavailability studies) essential to the approval of the supplement and conducted or sponsored by the applicant or to which the applicant had a right of reference. The approval of a subsequent application for a change approved in the supplement may not be made effective for *three years* from the date of approval of the original supplement.
- (5) A new drug application (or supplement to a new drug application) approved during the period from January 1, 1982 to September 24, 1984, which includes an active ingredient (including any ester or salt of the active ingredient) that has been approved in another application. The approval of a subsequent application for the drug or a significant change made in a supplement may not be made effective for *two years* from September 24, 1984.

The Act required approved new drug applications to be supplemented with the required patent information by October 24, 1984. Patent information must now be filed with all newly submitted drug applications, and no NDA may be approved after September 24, 1984, without the pertinent patent information. The patent numbers and the expiration dates of appropriate patents that are the subject of an approved NDA will be published in this Addendum or in the monthly Cumulative Supplement to this publication. Patent information on unapproved applications or on patents beyond the scope (i.e., process or manufacturing) of the Act will not be published.

The patents that FDA regards as covered by the statutory provisions for submission of patent information are: patents that claim the active ingredient or ingredients, drug product patents, which include formulation/composition patents, but exclude process patents, and use patents for a particular indication or method of using the product. To ensure that only appropriate patents are published, the Agency has an obligation to carefully screen the patent information that is submitted by the NDA holder. Therefore, NDA holders or applicants amending or supplementing applications with patent information are asked to certify that the patent(s) refers to a product approved or for which approval is being sought.

The Agency is required by the Act to publish all use patents, even if the use has not been approved by the Agency. Therefore, the publication of a use patent in this Addendum in no way confers Agency approval on the indication covered by that patent or implies that the indication has been approved.

Title I of the Act has been interpreted by the Agency not to include products approved under Section 507 of the Federal Food, Drug, and Cosmetic Act (antibiotic products). Because of this, (1) antibiotic products are not considered eligible for exclusivity protection, (2) holders of approved applications for antibiotic products need not submit the patent information as required of NDA application holders, and (3) Antibiotic Form 6 sponsors are not required to provide the patent certification statement which must be included in ANDAs.

However, Title II, the patent term restoration por-

tion of the Act, specifically includes antibiotic, non-antibiotic, and human biological products (as those terms are used in the Federal Food, Drug, and Cosmetic Act and the Public Health Service Act) in its provisions.

This section is arranged in ascending numerical order by NDA number and product number (FDA's filing system). Adjacent to the NDA and product number, appropriate patent numbers and their respective expiration date are shown. Finally, in the last column, the type of exclusivity granted and the date the exclusivity expires are shown. For an explanation of the codes used in the Addendum, see the Exclusivity Terms page.

Since all parts of this publication are subject to changes, additions, or deletions, the Addendum must be used in conjunction with the most current Cumulative Supplement.

EXCLUSIVITY TERMS

DUE TO SPACE LIMITATIONS IN THE EXCLUSIVITY COLUMN, THE FOLLOWING ABBREVIATIONS HAVE BEEN DEVELOPED. PLEASE REFER BACK TO THIS PAGE FOR AN EXPLANATION OF THE EXCLUSIVITY ABBREVIATIONS FOUND IN THE ADDENDUM.
