APPROVED PRESCRIPTION DRUG PRODUCTS
WITH
THERAPEUTIC EQUIVALENCE EVALUATIONS
CUMULATIVE SUPPLEMENT

I. PREFACE

This cumulative supplement is one of a series of monthly updates to the Approved Prescription Drug Products with Therapeutic Equivalence Evaluations, 3rd Edition, (the List) to cover interim revisions to the annual publication of the List in its entirety. The List is comprised of several parts and some by their nature are identified by the term "List". The cumulative supplements routinely provide updates to two of these Lists: The Drug Product List and the Addendum: DESI Pending List.

The List cannot be used effectively without the current cumulative supplement. Users may wish to place an asterisk (*) in the List to the left of the ingredient(s) in the Drug Product List and the product name in the Addendum to indicate that changes to that entry appear in the cumulative supplement. It is also suggested that earlier cumulative supplements be discarded to avoid possible confusion. In this way, only the List and current cumulative supplement need be referenced.

A. DRUG PRODUCT LIST

The Drug Product List cumulative supplements include the changes made since August 1, 1982. Each subsequent cumulative supplement replaces the previous month's cumulative supplement.

Information in this cumulative supplement follows the format of the Drug Product List. The presence of any therapeutic equivalence code indicates that the drug product is ^{multisource}; the deletion of a therapeutic equivalence code indicates that the drug product has become single source. (An infrequent exception exists when a therapeutic equivalence code is revised. In that case the deletion of the therapeutic equivalence code is followed immediately by the addition of the revised one.)

Context information on drug products is provided in each cumulative supplement for completeness to assist in locating the proper place in the Drug Product List for the revision. (Strength(s) which already exist in the publication will not be repeated for context.) A page number in parentheses referring to the Drug Product List is located to the right of the ingredient(s).

Additions to the Drug Product List are indicated by new information in the cumulative supplement. Additions new to the current cumulative supplement are indicated by the symbol >ADD< to the left of the line on which new information exists. The >ADD< symbol is dropped in subsequent cumulative supplements for that item.

Deletions from the Drug Product List are indicated by overstruck print in the cumulative supplement. Deletions new to the current cumulative supplement are indicated by the symbol >DLI> (DELETE) to the left of the line containing the overstruck print. The >DLI> symbol is dropped in subsequent cumulative supplements for that item.

A newly approved product is identified by the lozenge (*) to the right of its strength. This identifier remains throughout all cumulative supplements for this edition.

B. ADDENDUM: DESI Pending List

Information in this cumulative supplement follows the format of the Addendum. Additions and deletions are indicated in the same manner as in the cumulative supplement to the Drug Product List. A change in Current Status of a DESI product is also indicated by an addition and a deletion.

III. SPECIAL NOTES

A. INDICES AND ABBREVIATIONS:

STANDARD TERMS:

Added Route of Administration: INTRAPERITONEAL

B. REPORT OF COUNTS FOR THE DRUG PRODUCT LIST

Categories of counts derived from product information in the Drug Product List and from this cumulative supplement are presented. The report includes counts of new molecular entities approved by the agency during the current month and the past three quarters.

C. APPLICANT (NAME) CHANGES

Because it is not practical to identify in the cumulative supplement each and every product involved when an applicant transfers its entire line of approved drug products to another applicant, or when an applicant changes its name, the cumulation of these transfers and name changes will be identified in this Special Notes section only. Where only partial approved product lines are transferred between applicants, each approved product involved will appear as an applicant name change in the cumulative supplement.

APPLICANT (NAME) CHANGES

<u>Former Applicant (Name)</u>	<u>New Applicant (Name)</u>	<u>New Abbreviated Name</u>
NATCON CHEMICAL CO INC ENDO LABORATORIES INC SUB EI DUPONT DE NEMOURS AND CO INC	NATCON CORPORATION DUPONT PHARMACEUTICALS/ EI DU PONT DE NEMOURS AND CO INC	NATCON DUPONT PHARMS/DUPONT

APPLICANT (NAME) CHANGES

<u>Former Applicant (Name)</u>	<u>New Applicant (Name)</u>	<u>New Abbreviated Name</u>
WESTERN RESEARCH LABORATORIES INC	PHARMACEUTICAL BASICS INC	PHARM BASICS
FEDERAL PHARMACAL INC	LEMMON COMPANY	LEMMON
PREMO PHARMACEUTICAL LABORATORIES INC	LEMMON COMPANY	LEMMON
NORWICH-EATON PHARMACEUTICALS DIV MORTON-NORWICH PRODS INC	NORWICH-EATON PHARMACEUTICALS INC	NORWICH-EATON PHARMS
GENERIC PHARMACEUTICAL CORPORATION DIVISION OF IVY LAB INC	BOOTS PHARMACEUTICAL INC.	BOOTS PHARMACEUTICAL

The reader should consult this special list each month to become aware of such transfers and changes. By referring to the Applicant Index in the 3rd Edition, the transferred products can be identified. The reader might wish to flag these products in the List as a reminder that the applicant has been changed.

D. THERAPEUTIC EQUIVALENCE EVALUATIONS EXAMPLES

Chelsea Laboratories has performed an acceptable bioavailability/bioequivalence study for its 500mg sulfasalazine tablets. The therapeutic equivalence evaluation was changed, therefore, from BP to AB. On page 2-11, of the 3rd Edition of this publication, Chelsea's sulfasalazine tablet was used as an example of a therapeutically inequivalent product. The designation of the therapeutic equivalence code in the example for the 4th Edition, scheduled for publication in October, 1983, will be replaced.

E. SUBSCRIPTION FORM

The 4th Edition of this publication is scheduled to be available as a new subscription from the Government Printing Office (GPO) in October, 1983. It will contain data current through July, 1983. The first supplement to that edition will contain updates covering both August and September, 1983, and is intended to be distributed by GPO with the publication. All supplements to the 4th Edition will be provided as part of the base subscription price.

Subscribers to the current 1982 publication will continue to receive supplements through September, 1983, to be provided updated data through August, 1983.

A subscription form has been provided at the end of this supplement to assist in extending the subscription to this publication through the 4th Edition (1983 publication). This form will appear again in each remaining supplement to the 1982 publication.

F. THERAPEUTIC EQUIVALENCE EVALUATIONS OF CERTAIN TOPICAL PRODUCTS

Recent data demonstrate that some similarly formulated post 1962 topical products do not necessarily perform similarly. Topical products can be pharmaceutically equivalent but may present bioequivalence problems. In these cases, products cannot be coded AT. Pharmaceutically equivalent topical products which raise questions of bioequivalence will be coded AB when supported by clinical trials or adequate bioavailability data and BT in the absence of such data. On that basis, codes apply mainly to products which are the subject of post-1962 "paper NDAs." Multisource topical drug products approved as conventional NDAs are required to demonstrate therapeutic equivalence to be coded AB.

In this month's cumulative supplement, betamethasone valerate cream for TJ Roaco (Betaderm), Lemmon (Beta-Yal) and Schering (Valisone) have been coded as AB because bioequivalence for these products has been demonstrated. On the other hand, Schering's newly formulated betamethasone dipropionate ointment (Diprolene) and its existing ointment (Diprosone), possess a potential therapeutic difference and have been coded as BT, since they have been purposefully formulated to provide different clinical performance.

III. REPORT OF COUNTS FOR THE DRUG PRODUCT LIST

DESCRIPTION OF REPORT

The following report provides summary counts derived from product information in the Drug Product List and the current cumulative supplement. The counts appear in two sections. Section A. refers to the products in the List and Section B. to products in the current cumulative supplement. A new column of data will appear in Section A. each three-month period following July '83. Section A. therefore will provide baseline and quarterly data while Section B. provides monthly activity.

USE OF REPORT

From the data presented under Section B., users should be able to observe such things as (1) newly approved, DESI effective and remarketed drug products which are added to the List; (2) products that are being removed from the List as the result of withdrawal of approval, changes from prescription to over-the-counter status and discontinued marketing of products; and, (3) trends in approval of products as either multisource or single source during each month within the quarter. The report does not reflect category changes from multisource to single source and vice versa. However, the net gain that results from all additions, deletions and category changes is reflected in the quarterly counts for multisource and single source products.

Drug Product Definition

For this report, a drug product is the representation in the Drug Product List of an active moiety (includes molecular entity and its salts, esters and derivatives) either as a single entity or as a combination product, provided in a specific dosage form and strength for a given route of administration marketed by a firm under a particular generic or trade name.

New Molecular Entity

The active moiety has not previously been approved (either as the parent compound or as a salt, ester or derivative of the parent compound) in the United States for use in a drug product either as a single ingredient or part of a combination.

Drug Product Count

This report provides counts in several categories from the list composed of domestically marketed drug products approved for both safety and effectiveness under sections 505 and 507 of the Federal Food, Drug, and Cosmetic Act. Counts of products still pending in the DESI review are not provided. Excluded also are those approved drug products marketed by distributors; those marketed solely abroad; and products now regarded as medical devices, biologics or foods. Also not included in the counts are those duplicate products of a given applicant whose only distinguishing characteristics are items such as package size, inactive ingredient(s), color and alternate manufacturing sites. These various counts are excluded because the Drug Product List itself excludes products from these categories.
